Project Initialization and Planning Phase

Date	03 October 2026
Team ID	2
Project Name	FitBuddy – AI Fitness Plan Generator using Gemini Models
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The customer problem statements below capture who FitBuddy serves and why existing options fail them. They guided the feature selection in the brainstorming phase.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A college student and gym beginner	follow a structured weekly workout plan to lose belly fat and build muscle	generic online plans don't match my age, weight or experience	they are one-size-fits-all and I can't afford a personal trainer	confused, unmotivated and likely to quit
PS-2	A working professional with limited time	adjust my plan when it is too hard or doesn't fit my schedule (e.g. more cardio, fewer days, no equipment)	static PDF plans and apps can't be changed in plain language	they only offer fixed templates	frustrated and stuck with a plan I can't follow
PS-3	A fitness coach managing several students	see each person's plan and how it changed over time in one place	plans are scattered across chats and documents	there is no central record of original and updated plans	overwhelmed and unable to track progress

Summary problem statement

People who want to get fitter, especially beginners, lack affordable access to **personalized, safe and adaptable** workout plans. Generic plans ignore age, weight, goal, intensity and experience. They cannot be changed through simple feedback, and coaches have no central view of their clients' plans. FitBuddy uses Google Gemini models to generate a structured 7-day plan with a nutrition/recovery tip, revise it from plain-language feedback while keeping every version, and give coaches a protected dashboard.
